Retrocausality or Backwards causation is a concept of cause and effect where the effect precedes its cause in time, so a later event in time can affect an earlier event in time. In quantum physics, the distinction between cause and effect is not made at the most fundamental level, so time-symmetric systems can be viewed as causal or retro-causal.

Time travel is the concept of movement between certain points in time, analogous to movement between different points in space by an object or a person, typically using a hypothetical device known as a time machine.
